LIVE & DRY BLOOD ANALYSIS: A PERSONALIZED BLOOD MICROSCOPY EDUCATIONAL SESSION

Explore blood microscopy through the viewing of live and dried-blood samples. These educational sessions offer an opportunity to see and discuss visible features of a small blood sample, including the appearance and arrangement of blood cells, and are a personalized, wellness educational program based on your own health data, not medical diagnostic or treating a disease.

WHAT IS LIVE BLOOD ANALYSIS?

A small drop of freshly collected capillary blood is viewed under a light- and dark-field microscope. The session focuses on observable features such as red blood cell shape, spacing, movement within the sample, and other visible structures.

WHAT IS DRY BLOOD ANALYSIS?

Small drops of blood are allowed to dry on a slide and viewed under magnification. The patterns that form as the sample dries can be described and compared for educational purposes.

PEOPLE SEEK THIS WORK BECAUSE THEY...

- Are curious about what blood looks like under a microscope
- Enjoy visual, hands-on wellness education
- Want to ask questions about blood cells and sample characteristics
- Prefer individualized discussions about general wellness topics

WHAT HAPPENS DURING A SESSION?

- A small finger-prick blood sample is collected
- Live and dried samples are viewed under magnification
- Visible characteristics are discussed
- Learn how microscopy differs from standard laboratory blood testing

SESSION FEES

- $150 for 30 minutes
- To make an appointment, call Michelle A. Adams, BNC, 775-741-6188 or email her at Solenyahealth@proton.me

Educational and Informational Purposes Only
This educational report is provided solely for educational, informational, and wellness purposes. The information contained herein is based on specific genetic variations analyzed from your sample and current scientific research in the field of nutritional genomics. Science is constantly evolving, and these findings reflect probabilities rather than definitive certainties.

Live and Dry Blood Analysis
Live and dry blood microscopy in this setting is for observation and education only. It cannot diagnose nutrient deficiencies, infections, toxicity, blood disorders, or other medical conditions. Findings should not be used in place of validated laboratory tests or medical evaluation.

No Medical Advice or Diagnosis
The content of this report does not constitute medical advice, diagnosis, prognosis, or treatment. It is not intended to replace professional medical consultations, screening, or clinical care. This test does not check for, diagnose, or predict hereditary diseases, medical conditions, or food allergies.

Consultation with Healthcare Providers
You are strongly advised to review the results of this report with a qualified healthcare professional, such as a physician, registered dietitian, or genetic counselor, before making any significant changes to your diet, exercise routine, lifestyle, or supplement intake. Never disregard professional medical advice or delay seeking it because of information you read in this report.

Limitation of Liability
Write All, LLC dba Solenya Health makes no warranties, express or implied, regarding the accuracy, completeness, or efficacy of the recommendations provided. By using this report, you acknowledge and agree that Write All, LLC dba Solenya Health and its owner Michelle Adams shall not be held liable for any health outcomes, adverse effects, or direct or indirect damages resulting from your interpretation or application of the information provided in this report.
